

BioMop Application System

The **BioMop Application System** is a fully automated floor cleaning system. It is designed for larger kitchen and food processing facilities.

The **System** is shipped with the dilution ratio pre-set to insure the correct amount of **BioMop Plus™** is applied and chemical costs are controlled. All components for wall-mounted installation are included (can be completed in 10 minutes without the need of a plumber). An inlet hose, a spray gun and a siphon tube that runs from the **System** into a **BioMop Plus™** gallon jug or 5-gallon pail is included.

The floor is first hosed or power washed with water-only in the usual manner. Then turn two valves on the front of the **System** and apply **BioMop Plus™** at the pre-set dilution. Application for 750 sq. ft. of floor space takes only 2 minutes.

Specifications

- ◆ Package Contents – Application System, suction tube, spray gun, inlet hose, backflow preventor assembly, metering tips, wall mounting hardware, and instruction sheet.
- ◆ Application Rate – 2 oz. of **BioMop Plus™** applied per minute of hosing.
- ◆ Recommended **BioMop Plus™** Package Size – 5 gallon pail.

Clean The Floor And Solve A Multitude Of Kitchen Problems

Restaurants and other food preparation facilities often experience sanitation problems associated with the buildup of kitchen grease (organic waste) on floors, in drains, and under heavy equipment. These problems include fruit and drain fly infestations, slippery floor surfaces, foul odors, and clogged (slow) drains. Mopping with standard floor cleaning products, or hosing/power washing with water only, does not remove grease and organic waste -- it only breaks it up pushing it into drains and under equipment where it accumulates.

New formula **BioMop Plus™** is a state-of-the-art floor cleaner combined with a highly concentrated biological degrader. The biological component consists of Bacillus-family microorganisms including **MGD™** (Microbial Grease Degradar), a patent-pending strain that breaks down long chain fatty acids -- the primary component of problem grease deposits. **BioMop Plus™** quickly penetrates porous floor surfaces and digests grease that accumulates over time. It also inhibits foul odors caused by rancid or anaerobic environments. **BioMop Plus™** cleans the floor and removes organic waste -- **all in one step.**

BioMop Plus™ can be applied by mopping or hosing. For mopping add 2 oz. to 1-gallon water and mop in the usual manner (treat drains by pouring the unused mop water into each drain). To apply by hosing use the **BioMop Hose End Sprayer** (for smaller facilities) or the wall-mounted **BioMop Application System** (for larger facilities). Both systems inject **BioMop Plus™** into the water stream at pre-set dilutions ratios.

Pest Management Professionals and sanitation experts agree that sanitation is critical for a safe and pest-free environment. Standard cleaning products will not remove grease, fat, and oil build-up. The regular use of **BioMop Plus™** will biodegrade (remove) organic waste and save employee-time and other cleaning costs.

NSF
National Sanitation
Foundation
Program Listed - All
2002

BioMop Plus™ is now registered in NSF's listing of nonfood compounds approved for use in and around federally inspected food processing establishments. NSF Registration assures inspection officials and end users that a formulation and label meet appropriate food safety regulations.

This registration also provides guidance for product safety officials at other establishments when evaluating product safety.

BioMop Mop Water Dispenser

The **BioMop Mop Water Dispenser** is ideal for facilities that mop their floors. The dispenser insures an accurate dilution rate and helps control product usage. Simply push one button and fill the mop bucket.

BioMop Hose End Sprayer

The **BioMop Hose End Sprayer** is designed for small kitchen facilities that hose or power wash their floors. The sprayer attaches to the end of a garden hose and is easy to operate.

The floor is first hosed or power washed with water-only in the usual manner. **BioMop Plus™** application for a 750 sq. ft. kitchen takes only 2 minutes.
