

# A COMPLETE LINE OF BIOLOGICAL PRODUCTS FOR PEST MANAGEMENT PROFESSIONALS

## PROBLEMS

- ▶ Food service accounts can be very profitable, but they can also be a nightmare. Why? Because effective pest control depends on the customer's sanitation practices.
- ▶ Over time grease and food waste accumulates on the floor, in cracks and crevices, in the grout, in drains, and under equipment. This waste soon decays, becomes odorous, and starts attracting fruit flies, roaches, and other pests.
- ▶ Standard cleaning products (including so-called "degreasers") **do not remove** grease buildup. Significant grease buildup will "doom" even the best pest service.

## SOLUTIONS

- ▶ Instead of issuing sanitation reports, provide your customers with grease-fighting products that really work!
- ▶ **BioMop Plus™**, **DrainGel™** and **DrainFoam™** contain microorganisms that quickly and safely degrade kitchen grease and other organic wastes. **These microorganisms actually "digest" the grease - not simply "break it up" like standard cleaning products.**
- ▶ **BioMop Plus™**, **DrainGel™** and **DrainFoam™** were specifically designed for the commercial pest control industry. Several application systems are also available for solving common problems encountered in real world kitchen environments.

### BioMop Plus™ - Bacterial Formulation For General Cleaning And Removal Of Organic Material

New formula **BioMop Plus™** is specifically designed for cleaning restaurant and commercial kitchen floors, hard-to-access corners, and drains. **BioMop Plus™** combines patent-pending surfactants for immediate cleaning and a proprietary blend of concentrated bioenzymatic actives for degrading the most resistant grease molecules, the long-chain fatty acids. Each application of **BioMop Plus™** removes layers of embedded soil and grease. Regular use prevents food and grease waste build-up, reduces slippery floor surfaces, maintains a floor that is deep-clean and odor-free, and reduces organic material buildup in drains.

### DrainGel™ - Bacterial Formulation For Removal Of Organic Material From Drain Lines And Non-Drain Areas

**DrainGel™** is a state-of-art bacterial formulation for removal of organic material from drain lines and non-drain areas. **DrainGel™** contains **MGD™** (Microbial Grease Degradator), a Bacillus strain that breaks down complex grease molecules (kitchen grease). Application is easy - **DrainGel™** is poured into drains (its special formula "clings" to the sides of pipes) or it can be easily sprayed under equipment and on other hard-to-reach areas.

### DrainFoam™ - Foaming Bacterial Formulation For Removal Of Organic Material From Drain Lines And Non-Drain Areas

**DrainFoam™** is specifically designed for cleaning drains and hard-to-access corners, cracks, and crevices when foaming is the preferred method of application. **DrainFoam™** "clings" to drain sides and up, under, and behind equipment. **DrainFoam™** contains a proprietary blend of concentrated bioenzymatic actives for degrading the most resistant grease molecules, the long-chain fatty acids. **DrainFoam™** can be applied with manual or power-operated foamers.

## Application Methods

The **BioMop Plus™** and **DrainFoam™** dispensing pump attaches to the gallon size jug and dispenses one (1) ounce per plunge helping to control product usage. The pumps are free to all PMP's - to order contact American Bio-Systems.

## BioMop™ Hose End Sprayer

The **BioMop™** Hose End Sprayer is designed for small-medium size facilities that hose their floors. The sprayer attaches to the end of an ordinary garden hose and offers automatic dilution with convenient control of product usage. First hose the floor with water-only. Then attach the **BioMop™** container using an easy-to-operate quick coupler. Takes only 2 minutes to rinse 750 sq. ft. of floor area. Shipped complete with application instructions.

## BioMop™ Application System

The **BioMop™** Application System is a fully automated floor cleaning system designed for larger facilities that hose their floors. This wall mounted system is easy to install (10 minutes without a plumber) and easy to use. First hose the floor with water-only. Then turn two valves on the front of the system and rinse the floor with the pre-set **BioMop Plus™** dilution. Takes only 2 minutes to rinse 750 sq. ft. of floor area. Shipped complete with installation and application instructions.

## BioMop™ Mop Water Dispenser

The **BioMop™** Mop Water Dispenser is for larger facilities that mop their floors. This wall-mounted dispenser automatically mixes **BioMop Plus™** with water at the proper dilution. Simply push one button and fill the mop bucket. Easy to install; shipped complete with installation instructions.
